Water Chemistry: An Introduction to the Chemistry of Natural and Engineered Aquatic Systems

Patrick Brezonik, William Arnold

Water Chemistry provides students with the tools necessary to understand the processes that control the chemical species present in waters of both natural and engineered systems. After providing basic information about water itself and the chemical composition of water in environmental systems, the text covers the necessary theory (thermodynamics, activity, and kinetics) and background material to solve problems. It emphasizes that both equilibrium and kinetic processes are important in aquatic systems. The book does not merely focus on inorganic constituents, but also on the fate and reactions of organic chemicals.

The solving of quantitative equilibrium and kinetic problems using mathematical, graphical, and computational tools is emphasized throughout presentations on acid-base chemistry, complexation of metal ions, solubility of minerals, and oxidation-reduction reactions. The use of these problem-solving tools is then extended in the presentation of topics relevant to natural systems, including dissolved oxygen, nutrient chemistry, geochemical controls on chemical composition, photochemistry, and natural organic matter. The kinetics and equilibria relevant to engineered systems (e.g., chlorination and disinfection chemistry, sorption and surface chemistry) and organic contaminant chemistry are also discussed. Numerous in-chapter examples that show the application of theory and demonstrate how problems are solved using algebraic, graphical, and computer-based techniques are included. Examples are relevant to both natural waters and engineered systems.

From reader reviews:

Nicholas Walsh:

Nowadays reading books become more and more than want or need but also turn into a life style. This reading behavior give you lot of advantages. Advantages you got of course the knowledge the actual information inside the book that will improve your knowledge and information. The data you get based on what kind of e-book you read, if you want drive more knowledge just go with education and learning books but if you want really feel happy read one along with theme for entertaining such as comic or novel. The particular Water Chemistry: An Introduction to the Chemistry of Natural and Engineered Aquatic Systems is kind of publication which is giving the reader unstable experience.

Ann Davis:

Reading a e-book tends to be new life style on this era globalization. With reading you can get a lot of information that can give you benefit in your life. Having book everyone in this world could share their idea. Guides can also inspire a lot of people. Plenty of author can inspire their particular reader with their story or even their experience. Not only situation that share in the books. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach children, there are many kinds of book that exist now. The authors these days always try to improve their ability in writing, they also doing some investigation before they write to their book. One of them is this Water Chemistry: An Introduction to the Chemistry of Natural and Engineered Aquatic Systems.

James Yancey:

Would you one of the book lovers? If yes, do you ever feeling doubt while you are in the book store? Attempt to pick one book that you never know the inside because don't judge book by its handle may doesn't work the following is difficult job because you are afraid that the inside maybe not seeing that fantastic as in the outside appearance likes. Maybe you answer can be Water Chemistry: An Introduction to the Chemistry of Natural and Engineered Aquatic Systems why because the fantastic cover that make you consider in regards to the content will not disappoint an individual. The inside or content is fantastic as the outside or cover. Your reading 6th sense will directly make suggestions to pick up this book.

Donald Benson:

Reading a book to get new life style in this calendar year; every people loves to go through a book. When you study a book you can get a great deal of benefit. When you read publications, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you want to get information about your analysis, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, such us novel, comics, as well as soon. The Water Chemistry: An Introduction to the Chemistry of Natural and Engineered Aquatic Systems will give you new experience in looking at a book.
