In Vitro Methods in Cell-Mediated Immunity

In Vitro Methods in Cell-Mediated Immunity

In Vitro Methods in Cell-Mediated Immunity focuses on methods for approaching cell-mediated immune responses in vitro.

This book provides, in simplified in vitro systems, a basis for understanding the mechanism of the in vivo response and discusses useful and reliable in vitro tests for cell-mediated immune responses in humans, where in vivo testing is often not possible.

The topics discussed include factors and activities produced in vitro by lymphocytes; biological implications of in vitro phenomena; and requirements and prospects for improved methodology. The leucocyte migration technique for in vitro detection of cellular hypersensitivity in man; proliferation of human blood lymphocytes stimulated by antigen in vitro; and virus plaque assay for antigen-sensitive are also elaborated in this text.

This publication is a good reference for microbiologist and immunologists, including medical students researching on in vitro models for cell-mediated immune reactions.
