Into the Cool: Energy Flow, Thermodynamics, and Life

Eric D. Schneider, Dorion Sagan

Into the Cool: Energy Flow, Thermodynamics, and Life Eric D. Schneider, Dorion Sagan

Scientists, theologians, and philosophers have all sought to answer the questions of why we are here and where we are going. Finding this natural basis of life has proved elusive, but in the eloquent and creative *Into the Cool*, Eric D. Schneider and Dorion Sagan look for answers in a surprising place: the second law of thermodynamics. This second law refers to energy's inevitable tendency to change from being concentrated in one place to becoming spread out over time. In this scientific tour de force, Schneider and Sagan show how the second law is behind evolution, ecology, economics, and even life's origin.

Working from the precept that "nature abhors a gradient," *Into the Cool* details how complex systems emerge, enlarge, and reproduce in a world tending toward disorder. From hurricanes here to life on other worlds, from human evolution to the systems humans have created, this pervasive pull toward equilibrium governs life at its molecular base and at its peak in the elaborate structures of living complex systems. Schneider and Sagan organize their argument in a highly accessible manner, moving from descriptions of the basic physics behind energy flow to the organization of complex systems to the role of energy in life to the final section, which applies their concept of energy flow to politics, economics, and even human health.

A book that needs to be grappled with by all those who wonder at the organizing principles of existence, *Into the Cool* will appeal to both humanists and scientists. If Charles Darwin shook the world by showing the common ancestry of all life, so *Into the Cool* has a similar power to disturb—and delight—by showing the common roots in energy flow of all complex, organized, and naturally functioning systems.

“Whether one is considering the difference between heat and cold or between inflated prices and market values, Schneider and Sagan argue, we can appl

From reader reviews:

Hilda Baker:

Have you spare time to get a day? What do you do when you have much more or little spare time? Yes, you can choose the suitable activity regarding spend your time. Any person spent their own spare time to take a stroll, shopping, or went to often the Mall. How about open or maybe read a book entitled Into the Cool: Energy Flow, Thermodynamics, and Life? Maybe it is being best activity for you. You realize beside you can spend your time together with your favorite's book, you can wiser than before. Do you agree with their opinion or you have other opinion?

Sarah Maddocks:

You could spend your free time to see this book this reserve. This Into the Cool: Energy Flow, Thermodynamics, and Life is simple bringing you can read it in the park your car, in the beach, train along with soon. If you did not possess much space to bring the printed book, you can buy the particular e-book. It is make you better to read it. You can save the book in your smart phone. Consequently there are a lot of benefits that you will get when one buys this book.

Clayton Medina:

Beside this specific Into the Cool: Energy Flow, Thermodynamics, and Life in your phone, it could possibly give you a way to get nearer to the new knowledge or facts. The information and the knowledge you will got here is fresh from oven so don't become worry if you feel like an outdated people live in narrow community. It is good thing to have Into the Cool: Energy Flow, Thermodynamics, and Life because this book offers for you readable information. Do you sometimes have book but you don't get what it's facts concerning. Oh come on, that will not happen if you have this within your hand. The Enjoyable set up here cannot be questionable, similar to treasuring beautiful island. Use you still want to miss the idea? Find this book along with read it from now!

Ruby Freeman:

Is it anyone who having spare time and then spend it whole day by means of watching television programs or just laying on the bed? Do you need something new? This Into the Cool: Energy Flow, Thermodynamics, and Life can be the respond to, oh how comes? A fresh book you know. You are thus out of date, spending your free time by reading in this brand new era is common not a geek activity. So what these textbooks have than the others?
