Biopatent Law: Patent Strategies and Patent Management (SpringerBriefs in Biotech Patents) Andreas Hübel, Thilo Schmelcher, Ulrich Storz

Patents protecting biotechnological invention are becoming ever more important. Because biotechnology has many differences with respect to other technologies, lessons learned in other fields of technology cannot simply be transferred to adopt a suitable strategy for dealing with biotechnology inventions.

In this volume, general aspects of biopatent law will be discussed. This involves questions of patentability, including ethical issues and issues of technicality, as well as questions of patent exhaustion in cases where reproducible subject matter, like cells or seeds, is protected. Moreover, active and passive patent strategies are addressed. Further, insight will be given into patent lifetime management and additional protective measures, like supplementary protection certificates and data exclusivity. Here, strategies are discussed how market exclusivity can be extended as long as possible, which is particularly important for biopharmaceutical drugs, which create high R&D costs.
