Keynes and the Neoclassical Synthesis: Einsteinian versus Newtonian Macroeconomics (Routledge Studies in the History of Economics) Dario Togati

This remarkable volume provides a critical assessment of *Neoclassical Synthesis*, long regarded as the standard interpretation of Keynes. Taking issue with this orthodoxy, the author offers a unique interpretation of the foundation of modern macroeconomics, arguing that the subject derives from the conflict between two research programmes inspired by different paradigms in physics: the *Newtonian* programme of Hicks and the *Einsteinian* approach of Keynes.

Original and provocative in its reflections, *Keynes and the Neoclassical Synthesis* not only offers a fresh interpretation of Keynes but makes an important contribution to debates within post-Keynesian economics. It will thus be of interest to all those interested in Keynes' place in the history of economic thought and macroeconomic methodology.
