Discover how to streamline complex bioinformatics applications with parallel computing

This publication enables readers to handle more complex bioinformatics applications and larger and richer data sets. As the editor clearly shows, using powerful parallel computing tools can lead to significant breakthroughs in deciphering genomes, understanding genetic disease, designing customized drug therapies, and understanding evolution.

A broad range of bioinformatics applications is covered with demonstrations on how each one can be parallelized to improve performance and gain faster rates of computation. Current parallel computing techniques and technologies are examined, including distributed computing and grid computing. Readers are provided with a mixture of algorithms, experiments, and simulations that provide not only qualitative but also quantitative insights into the dynamic field of bioinformatics.

Parallel Computing for Bioinformatics and Computational Biology is a contributed work that serves as a repository of case studies, collectively demonstrating how parallel computing streamlines difficult problems in bioinformatics and produces better results. Each of the chapters is authored by an established expert in the field and carefully edited to ensure a consistent approach and high standard throughout the publication.

The work is organized into five parts:

- * Algorithms and models
- * Sequence analysis and microarrays
- * Phylogenetics
- * Protein folding
- * Platforms and enabling technologies

Researchers, educators, and students in the field of bioinformatics will discover how high-performance computing can enable them to handle more complex data sets, gain deeper insights, and make new discoveries.

Robert King:

What is your hobby? Have you heard that question when you got college students? We believe that that concern was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And you know that little person such as reading or as studying become their hobby. You should know that reading is very important as well as book as to be the matter. Book is important thing to incorporate you knowledge, except your own teacher or lecturer. You discover good news or update in relation to something by book. A substantial number of sorts of books that can you choose to use be your object. One of them are these claims Parallel Computing for Bioinformatics and Computational Biology: Models, Enabling Technologies, and Case Studies (Wiley Series on Parallel and Distributed Computing).

Denita Lumley:

Reading a book make you to get more knowledge as a result. You can take knowledge and information from the book. Book is prepared or printed or created from each source that will filled update of news. In this

particular modern era like at this point, many ways to get information are available for you. From media social similar to newspaper, magazines, science reserve, encyclopedia, reference book, novel and comic. You can add your knowledge by that book.
