Aryl hydrocarbon receptor mediated transactivity of 13 pesticides commonly used in denmark (Italian Edition) Agnese Tabbò

Alcune sostanze chimiche, rilasciate nell'ambiente dall'uomo, possono agire sulla normale omeostasi del sistema endocrino, portando a pericolose conseguenze. Questi composti sono indicati con la sigla EDCs (endocrine disrupting chemicals). Il recettore per gli idrocarburi aromatici (AhR) è coinvolto nella mediazione biologica di queste sostanze. La conoscenza del funzionamento di questo recettore è uno step importante per l'identificazione dei ligandi che potrebbero provocare effetti dannosi all'organismo. Il presente progetto si pone come obiettivo l'analisi di 13 pesticidi comunemente usati in Danimarca, per evidenziare la loro possibile azione dannosa sul sistema endocrino, attraverso l'attivazione forzata dell'AhR o impedendone il normale funzionamento.
