Parallel Programming: for Multicore and Cluster Systems Thomas Rauber, Gudula Rünger

Innovations in hardware architecture, like hyper-threading or multicore processors, mean that parallel computing resources are available for inexpensive desktop computers. In only a few years, many standard software products will be based on concepts of parallel programming implemented on such hardware, and the range of applications will be much broader than that of scientific computing, up to now the main application area for parallel computing.

Rauber and Rünger take up these recent developments in processor architecture by giving detailed descriptions of parallel programming techniques that are necessary for developing efficient programs for multicore processors as well as for parallel cluster systems and supercomputers. Their book is structured in three main parts, covering all areas of parallel computing: the architecture of parallel systems, parallel programming models and environments, and the implementation of efficient application algorithms. The emphasis lies on parallel programming techniques needed for different architectures.

The main goal of the book is to present parallel programming techniques that can be used in many situations for many application areas and which enable the reader to develop correct and efficient parallel programs. Many examples and exercises are provided to show how to apply the techniques. The book can be used as both a textbook for students and a reference book for professionals. The presented material has been used for courses in parallel programming at different universities for many years.

From reader reviews:

Catherine Acevedo:

This Parallel Programming: for Multicore and Cluster Systems book is not really ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is actually information inside this guide incredible fresh, you will get details which is getting deeper an individual read a lot of information you will get. That Parallel Programming: for Multicore and Cluster Systems without we realize teach the one who looking at it become critical in pondering and analyzing. Don't become worry Parallel Programming: for Multicore and Cluster Systems can bring if you are and not make your carrier space or bookshelves' turn into full because you can have it inside your lovely laptop even mobile phone. This Parallel Programming: for Multicore and Cluster Systems having fine arrangement in word and also layout, so you will not truly feel uninterested in reading.

Nicholas Buchanan:

Do you one among people who can't read pleasant if the sentence chained inside straightway, hold on guys this kind of aren't like that. This Parallel Programming: for Multicore and Cluster Systems book is readable by you who hate those straight word style. You will find the data here are arrange for enjoyable looking at experience without leaving even decrease the knowledge that want to supply to you. The writer associated with Parallel Programming: for Multicore and Cluster Systems content conveys prospect easily to understand by many people. The printed and e-book are not different in the content material but it just different in the form of it. So , do you nonetheless thinking Parallel Programming: for Multicore and Cluster Systems is not loveable to be your top list reading book?

John Threadgill:

The experience that you get from Parallel Programming: for Multicore and Cluster Systems is the more deep you rooting the information that hide within the words the more you get interested in reading it. It does not mean that this book is hard to comprehend but Parallel Programming: for Multicore and Cluster Systems giving you thrill feeling of reading. The article author conveys their point in certain way that can be understood by means of anyone who read that because the author of this reserve is well-known enough. This specific book also makes your personal vocabulary increase well. It is therefore easy to understand then can go along, both in printed or e-book style are available. We highly recommend you for having this specific Parallel Programming: for Multicore and Cluster Systems instantly.

Kimberly Casselman:

Playing with family in the park, coming to see the coastal world or hanging out with good friends is thing that usually you may have done when you have spare time, and then why you don't try issue that really opposite from that. A single activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition associated with. Even you love Parallel Programming: for

Multicore and Cluster Systems, you can enjoy both. It is excellent combination right, you still want to miss it? What kind of hangout type is it? Oh can happen its mind hangout guys. What? Still don't have it, oh come on its called reading friends.
